Freshen up with Good Ventilation

A simple solution to indoor air quality problems is good ventilation

Lack of good ventilation can cause a build-up of moisture and stale air leading to mould and odours. Damp and dark sub floor areas can also attract termites. Riteflo provides complete ventilation solutions and a natural supply of light.

Riteflo may help solve these types of problems

Peeling Paint

Sub floor Debris

Termites

Mould

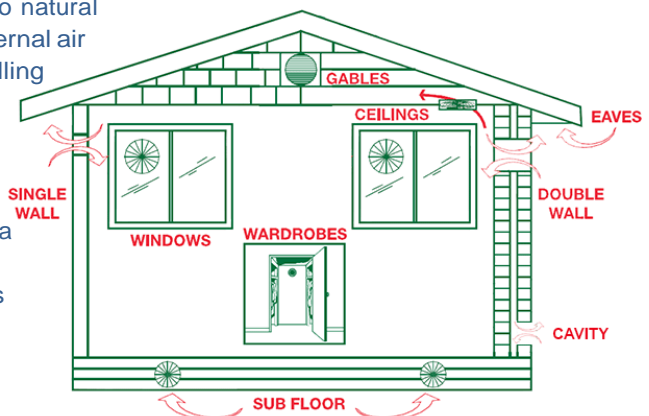

Condensation

Riteflo Ventilation Solutions

Riteflo ventilators are unique as they are the **ONLY** fans in the world with blades that rotate in both directions, due to natural differences in internal and external air pressure, and wind, thus expelling stale air and introducing fresh air and natural light.

This can offer almost continuous air movement of the desired space 24 hours a day, 7 days a week.

In the past ventilation products were usually terracotta vents, wire mesh vents, electric and/or solar fans.

A Healthy Home

Mould is probably the most common source of indoor air pollution which may cause allergies, headaches and respiratory problems. This is caused by dampness and poor ventilation in your home.

The Asthma Foundation in its brochure "Asthma the Basic Facts" lists a number of triggers to asthma symptoms, including 'Inhaled Allergens' (e.g. pollens, moulds, animal dander and dust mites) and 'Environmental Factors' (e.g. dust, pollution, wood smoke, bush fires). For the complete brochure and more information on asthma management go to: www.asthmaaustralia.org.au

Complete Home Dampness Solutions

Whilst Riteflo specialise in ventilation, they also have extensive knowledge, experience and understanding of why some areas are damp through poor drainage or other reasons.

Riteflo are dedicated to resolving problems associated with internal mould, mildew, condensation and sub floor ventilation.

Addressing the source of the problem is fundamental to providing the right solution. Just installing ventilators is usually not enough - a complete solution is needed.

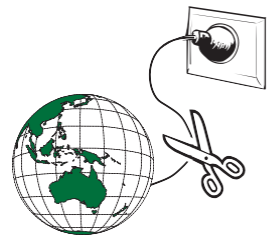

Riteflo can advise and carry out other measures that may be appropriate, for example, drainage, membranes, and through wall tubes. Ask us about Riteflo's **natural, non-toxic mould removal** product.

Riteflo Ventilation

- are **specialists** who provide free on site ventilation quotations for your property *
- will conduct a detailed assessment of your property *
- have over 48 years experience in the ventilation, dampness and building industry
- are qualified, professional and fully insured

Riteflo Ventilators

- need no electricity or sunlight to operate
- **help reduce greenhouse emissions**
- are environmentally friendly
- have silent operation
- have no running costs

Plan for the BEST Result

Riteflo has the experience and the knowledge to give you confidence to help you achieve a long lasting solution to ventilation problems. Riteflo work to the Australian Standard for ventilation A.S. 3660.1.

Riteflo Ventilators

Riteflo Ventilators come in a variety of models to ensure specific areas can be ventilated correctly.

Sub floor specialists - including:

- Roof Areas
- Gables
- Ceilings
- Skylights
- Walls
- Caravans
- Wardrobes
- Glass Blocks
- Garage Doors
- Rooms

DAMP-ROD

STORAGE DE-HUMIDIFIER

STOP! Mould, Mildew and Rust!

STOP! Musty Odours!

HELP! Prevent Allergies associated
with Dampness & Mould!

The **DAMP-ROD** warms, dries and circulates air in confined storage spaces through a round-the-clock process.

As air in the storage area is warmed by the **DAMP-ROD**, it expands. The expanded air causes pressure inside the storage space to be slightly higher than air pressure outside the enclosure. This pressure differential pushes stale air out of the storage area and fresh, clean air seeps in to replace the stale air.

As the air is warmed, it becomes lighter and circulates throughout the storage area to keep your valuables dry. When the air cools, it drops back to the floor where the **DAMP-ROD**, begins the warming process again.

DAMP-ROD, can be mounted horizontally on the wall near the floor or simply set it on the floor of the storage area. The area around the rod must be kept clear of any objects or clothing.

Energy consumption by the **DAMP-ROD**, is nominal. The electrical cost is around 5 cents per day! This is approximately 3 times less than moisture absorbent chemicals which are no longer required!

DAMP-ROD, is completely safe and the mild heat will not burn or scorch! It can be used in:

- store rooms • wardrobes • linen cupboards • under beds • pantries
- stairstorage and • basements, and comes with a **10YEAR GUARANTEE!**
